

# Oliver Infante

QA Engineer — Quality, automation and applied AI

oliver\_jose@live.com · Santo Domingo, Dominican Republic  
linkedin.com/in/oliver-infante-perez · github.com/Inf015

## PROFILE

Software Engineer specialized in QA. I design test cases, run regression suites and chase defects down to their root cause — and anything that can be automated, I automate. I come from development, so I understand the code I'm testing.

## SKILLS

|                            |                                                                                                                                                                  |
|----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| QA and Testing             | Manual testing · Functional test cases · Regression testing · Automated E2E testing · pytest · Defect reporting and tracking · Root cause analysis · QA sign-off |
| Automation and AI          | Agentic systems · Anthropic API · Local models (Ollama) · LLM as a judge · Telegram bots · Process automation                                                    |
| Tracking and Management    | Azure DevOps · Jira · Trello                                                                                                                                     |
| Languages and Frameworks   | Python · FastAPI · C# · .NET · TypeScript · Next.js · Dart · Flutter                                                                                             |
| Databases                  | PostgreSQL · SQL Server · MySQL · SQLAlchemy · Redis                                                                                                             |
| Infrastructure and Systems | Docker / Compose · Linux (DietPi) · nginx · Celery · SSH · Tailscale · Git / GitHub                                                                              |

## EXPERIENCE

**Junior Developer and IT Support** — Carga Fácil GHH Feb 2024 — Present

- Developing and maintaining web applications with .NET and C#.
- Leading the SEO structure and the design of the company website.
- Providing IT support and resolving hardware and software incidents for internal teams.

**QA Engineer and Mobile Developer** — Focused Project Apr 2024 — Jan 2025

- Contributing to a cross-platform support system for ADHD patients, psychologists and psychiatrists (Flutter mobile + web).
- Writing and executing functional test cases and regression suites for the patient and clinical staff modules.
- Reporting and tracking defects end to end in Azure DevOps.
- Taking part in sprint planning and in QA sign-off before each release.

**Systems, Web and Brand Lead** — La Infantería Motorsport Ongoing

- Building and maintaining the team's web platform on Next.js and Supabase: public site plus an authenticated admin panel.
- Backing the site with 72 automated vitest tests across three suites: unit, smoke against a running instance, and security.
- Testing the permission model negatively: that the public key cannot write to any table or upload to Storage, and that the data is left intact after the attempt.
- Administering the shop's systems and directing brand identity, online presence and results documentation.
- Providing technical support for the setup of the shop's Mustang chassis.

PROJECTS

---

**botqa** AUTHOR — OPEN SOURCE [github.com/Inf015/botqa](https://github.com/Inf015/botqa)

End-to-end testing engine for WhatsApp customer-service bots. A local model talks to the bot posing as a real customer, and a second model then grades the conversation against a checklist. It started as a way to test the bot at the company I work for, and I released it as a generic tool.

NODE.JS · OLLAMA · E2E TESTING · LLM AS A JUDGE · WHATSAPP · OPEN SOURCE

**Delta** IN DEVELOPMENT [github.com/Inf015/Delta](https://github.com/Inf015/Delta)

Telemetry analysis platform for sim racing: it turns a session's raw data into concrete answers about where time is lost and which setup change wins it back.

FASTAPI · POSTGRESQL · CELERY · NEXT.JS · DOCKER · PYTEST · TELEMETRY

**Focused** MOBILE DEVELOPER AND QA

ADHD support platform connecting patients, psychologists and psychiatrists in a single mobile and web experience. Final degree project.

FLUTTER · DART · MANUAL QA · AZURE DEVOPS · HEALTHCARE

**Kepubli** IN PRODUCTION [kepubli.com](https://kepubli.com)

Multi-user Telegram bot running in production with real users. It automates the full e-ink reading pipeline: per-user series tracking, conversion to optimized KEPUB and direct delivery to the reader.

PYTHON · TELEGRAM BOT API · DOCKER · PYTEST · AUTOMATION

**La Infantería Motorsport** DEVELOPMENT, QA AND ADMINISTRATION

Web platform for the team and the shop: public site plus an authenticated admin panel on Next.js and Supabase. It's the project where my QA work shows best, because the permission model isn't documented — it's verified by tests.

NEXT.JS · SUPABASE · POSTGRESQL · VITEST · SECURITY TESTING · RLS · CSP

---

EDUCATION

**B.Sc. in Software Engineering** MAGNA CUM LAUDE

INTEC — Instituto Tecnológico de Santo Domingo  
2020 — 2025

---

CERTIFICATIONS AND LANGUAGES

**ISTQB Foundation Level** — In progress (2026)

**Spanish** — Native

**English** — B1/B2 — Professional written communication
